Zhou, X. p454
Zhu, Z. p373

AMPLIFIERS

Fully passivated W-band InAlAs/InGaAs/InP monolithic low noise amplifiers p361
TLM diakoptics for coupled-mode analysis of GaAs MESFET distributed amplifier p261

ANALOGUE ELECTRONICS

Analysis of multilayer inset dielectric guides containing magnetised ferrites p390
Millimetre-wave frequency tripling using stacked heterostructure-barrier varactors on InP p272

ANTENNA ACCESSORIES

Analysis of quasiperiodic reflector antenna p293
Asymmetrical Gauss-Hermite beam mode analysis of corrugated pyramidal rectangular horn p385
Improved solution for mode coupling in different-sized circular apertures and its application p457
Research on microstrip multiway unequal power divider/combiner p437
Scattering from a dielectric cylinder axially loaded with periodic metallic rings p233
Slot-coupled self-diplexing array antenna for mobile satellite communications p119
Synthesis technique for scanning and/or reconfigurable beam reflector antennas with phase-only control p402
Volume-conformation method to study scattering by PEC objects with FDTD p131

ANTENNA ARRAYS

Balanced antipodal Vivaldi antenna for wide bandwidth phased arrays p97
Bifurcated waveguide fed broadwall slots radiating through a baffle p465
Cross-coupling between open-ended coaxial radiators p265
Derivation of orthogonal beams and their application to beamforming in small phased arrays p304
Electronically steered antenna system for the Australian Mobilesat p347
Improved solution for mode coupling in different-sized circular apertures and its application p457
Novel surface-wave antenna p1
Pattern synthesis with null constraints for circular arrays of equally spaced isotropic elements p103
Research on microstrip multiway unequal power divider/combiner p437
S-parameter analysis of multislot microstrip patch arrays: spectral domain approach p430
Scattering from elongated objects: direct solution in O(N log^2 N) operations p277
Single-layer dipole array for linear-to-circular polarisation conversion of slotted waveguide array p211
Slot-coupled self-diplexing array antenna for mobile satellite communications p119
Synthesis technique for scanning and/or reconfigurable beam reflector antennas with phase-only control p402

ANTENNA THEORY

Active frequency-selective surfaces p62
Analysis of post-tuned cavity-backed circular microstrip patch antennas p18
Analysis of surface-wave excitation and radiation mechanisms of a monopole on a circular grounded dielectric slab with critical thickness p335
Application of the extinction theorem to some antenna problems p471
Asymmetrical Gauss-Hermite beam mode analysis of corrugated pyramidal rectangular horn p385
Bifurcated waveguide fed broadwall slots radiating through a baffle p465
Characterisation of near-field focusing with application to low altitude beam focusing of the Arecibo tri-reflector system p284
Compact antenna range performance evaluation using simulated pattern measurements p200
Derivation of orthogonal beams and their application to beamforming in small phased arrays p304
Electric field integral equation for cylindrical structures p147
Entire-domain analysis of thin-wire antennas in layered media p317
Fabry-Perot approach to the design of double layer FSS p157
Improved solution for mode coupling in different-sized circular apertures and its application p457
Mode charts for confocal annular elliptic resonators p358
Novel surface-wave antenna p1
Pattern synthesis with null constraints for circular arrays of equally spaced isotropic elements p103
Radiation by axial slots on a dielectric-coated nonconfocal conducting elliptic cylinder p124
Radiation characteristics of a spherical helical antenna p7
Radiation characteristics of rectangular patch antennas with a laminated ground plane p107
Scattering from a dielectric cylinder axially loaded with periodic metallic rings p233
Simulated annealing applied to the Misell algorithm for phase retrieval p298
Synthesis technique for scanning and/or reconfigurable beam reflector antennas with phase-only control p402
Theoretical and experimental characterisation of CPW-fed microstrip antennas p13
Theoretical investigation of aperture-coupled rectangular dielectric resonator antenna p113
Use of quiet zone prediction in the design of compact antenna test ranges p193

AUTOMATIC TEST SYSTEMS

Improved HTSC surface loss measurements evaluating a multipath transmission signal p491

BIOLOGICAL AND BIOMEDICAL SYSTEMS

Comparison of computational electromagnetic codes applied to a sphere canonical problem p309

CABLES AND OVERHEAD LINES

Cross-coupling between open-ended coaxial radiators p265

CAPACITORS

Modelling of thin-film HTS/ferroelectric interdigital capacitors p397

CIRCUIT THEORY AND DESIGN

Correction of the parameters of the equivalent circuit proposed by Montgomery for a two-terminal-pair junction p542
Electromagnetic modelling and transient simulation of interconnects in high speed VLSI circuits p373
TLM diakoptics for coupled-mode analysis of GaAs MESFET distributed amplifier p261

COMPUTATIONAL COMPLEXITY

Scattering from elongated objects: direct solution in O(N log^2 N) operations p277

COMPUTER APPLICATIONS

Improved prediction of I_{F2} and I_G indices using neural networks p341

DIELECTRIC MATERIALS AND DEVICES

Improved approximation for effective permeability in microwave ferrites p444
Microwave measurement of the nonlinear refractive index of PZT p189
Modelling of thin-film HTS/ferroelectric interdigital capacitors p397
Theoretical investigation of aperture-coupled rectangular dielectric resonator antenna p113
Two-dimensional analysis of bandwidth of open hard surface p475
Whispering gallery dielectric resonator mode GaAs FET oscillator p441

DIGITAL ELECTRONICS

Electromagnetic modelling and transient simulation of interconnects in high speed VLSI circuits p373

EARTH SCIENCES

Quasicubic-segmented ionospheric model p323

ELECTROMAGNETIC COMPATIBILITY

Electromagnetic modelling and transient simulation of interconnects in high speed VLSI circuits p373

ELECTROMAGNETIC INTERFERENCE

Cross-coupling between open-ended coaxial radiators p265
Electromagnetic modelling and transient simulation of interconnects in high speed VLSI circuits p373

ELECTROMAGNETIC THEORY

Analysis of surface-wave excitation and radiation mechanisms of a monopole on a circular grounded dielectric slab with critical thickness p335
Analysis of TM scattering from open two-dimensional perfectly conducting shells using aggregated compactly-supported wavelet bases p152
Application of adaptive absorbing boundary condition to finite element solution of three-dimensional scattering p57
Application of parametric models to inverse scattering problems p31
Attenuation due to hydrometeors at 94 GHz: experimental results and comparison with theory p79
Comparison of computational electromagnetic codes applied to a sphere canonical problem p309
Convergence of the fictitious-current model p163
Cross-coupling between open-ended coaxial radiators p265
Electric field integral equation for cylindrical structures p147
Electromagnetic modelling and transient simulation of interconnects in high speed VLSI circuits p373
Fabry-Perot approach to the design of double layer FSS p157
General entire-domain method for analysis of dielectric scatterers p498
GTD solution with higher order terms to the diffraction by an edge: towards a uniform solution p43
Hybrid FE/MoM analysis of a cavity-backed slit loaded with anisotropic material p422
Image reconstruction of a perfectly conducting cylinder by the genetic algorithm p249
Improvements of dipole, helix, spiral, microstrip patch and aperture antennas with ground planes by using corrugated soft surfaces p244
Novel nine-port network analyser for measuring scattering coefficients of two-port devices p137
Obstacle diffraction and site shielding under varying incident illumination p87
Reflection dyadic for the soft and hard surface with application to the depolarising corner reflector p417
Scattering from a dielectric cylinder axially loaded with periodic metallic rings p233
Scattering from a dielectric cylinder with multiple eccentric cylindrical dielectric inclusions p505
Scattering from elongated objects: direct solution in O(N log^2 N) operations p277
Single-layer dipole array for linear-to-circular polarisation conversion of slotted waveguide array p211
Time-harmonic two- and three-dimensional Green dyadics for a special class of gyrotropic bianisotropic media p413
Two-dimensional analysis of bandwidth of open hard surface p475
Variational expression for propagation coefficient of an electromagnetic wave propagating along a closed rectangular chirowaveguide p174
Volume-conformation method to study scattering by PEC objects with FDTD p131

ELECTROMAGNETISM

Analysis of interconnect networks with conducting wedge loaded by an inhomogeneous dielectric substrate p217
Analysis of TM scattering from open two-dimensional perfectly conducting shells using aggregated compactly-supported wavelet bases p152
Application of adaptive absorbing boundary condition to finite element solution of three-dimensional scattering p57
Comparison of computational electromagnetic codes applied to a sphere canonical problem p309
Convergence of the fictitious-current model p163
Electric field integral equation for cylindrical structures p147
Electromagnetic field behaviour at edges in general bianisotropic media p527
Finite difference solution of EM fields by asymptotic waveform techniques p512
General entire-domain method for analysis of dielectric scatterers p498
GTD solution with higher order terms to the diffraction by an edge: towards a uniform solution p43
Method of lines for analysis of crossing transmission lines with finite-thickness conductors p254
Quasistatic analysis of microstrip lines on lossy inhomogeneous substrates p379
Reflection dyadic for the soft and hard surface with application to the depolarising corner reflector p417
Scattering from a dielectric cylinder with multiple eccentric cylindrical dielectric inclusions p505
Scattering from elongated objects: direct solution in O(N log^2 N) operations p277
Scattering parameters of arbitrarily oriented slot-coupled microstrip lines p141
Time-harmonic two- and three-dimensional Green dyadics for a special class of gyrotropic bianisotropic media p413
Two-dimensional analysis of bandwidth of open hard surface p475
Volume-conformation method to study scattering by PEC objects with FDTD p131

FILTERS AND FILTERING

Complex gyrator circuit of a junction circulator using weakly magnetised planar irregular hexagonal resonator p532
Correction of the parameters of the equivalent circuit proposed by Montgomery for a two-terminal-pair junction p542
Whispering gallery dielectric resonator mode GaAs FET oscillator p441
Wideband active microwave isolators using GaAs MMIC technology p179

INSTRUMENTATION AND MEASUREMENT

Novel nine-port network analyser for measuring scattering coefficients of two-port devices p137

INTEGRATED CIRCUITS

Electromagnetic modelling and transient simulation of interconnects in high speed VLSI circuits p373
Fabrication and microwave characterisation of multilayer circuits for MMIC applications p225
Fully passivated W-band InAlAs/InGaAs/InP monolithic low noise amplifiers p361
Wideband active microwave isolators using GaAs MMIC technology p179

INTERFERENCE SUPPRESSION

Cross-coupling between open-ended coaxial radiators p265
Electromagnetic modelling and transient simulation of interconnects in high speed VLSI circuits p373
Obstacle diffraction and site shielding under varying incident illumination p87

LINEAR NETWORK ANALYSIS

Analysis of a pair of dielectric coated cylinders above a dielectric substrate p67
TLM diakoptics for coupled-mode analysis of GaAs MESFET distributed amplifier p261

MAGNETIC MATERIALS AND DEVICES

Analysis of multilayer inset dielectric guides containing magnetised ferrites p390
Improved approximation for effective permeability in microwave ferrites p444
Synthesis of quarter-wave coupled junction circulators using moderately magnetised disc resonators with commensurate eigennetworks p238

MATHEMATICAL TECHNIQUES

Analysis of TM scattering from open two-dimensional perfectly conducting shells using aggregated compactly-supported wavelet bases p152
Application of adaptive absorbing boundary condition to finite element solution of three-dimensional scattering p57
Convergence of the fictitious-current model p163
Electric field integral equation for cylindrical structures p147
Electromagnetic field behaviour at edges in general bianisotropic media p527
Finite difference solution of EM fields by asymptotic waveform techniques p512
Free space dyadic Green's function applied to the full-wave numerical analysis of planar transmission lines and dielectric waveguides p328
General entire-domain method for analysis of dielectric scatterers p498
Image reconstruction of a perfectly conducting cylinder by the genetic algorithm p249
Scattering from elongated objects: direct solution in O(N log^2 N) operations p277
Simulated annealing applied to the Misell algorithm for phase retrieval p298
Time-harmonic two- and three-dimensional Green dyadics for a special class of gyrotropic bianisotropic media p413
Two-dimensional analysis of bandwidth of open hard surface p475
Volume-conformation method to study scattering by PEC objects with FDTD p131

MEASUREMENT OF SPECIFIC VARIABLES

Improved HTSC surface loss measurements evaluating a multipath transmission signal p491
Novel nine-port network analyser for measuring scattering coefficients of two-port devices p137

MEASUREMENT SCIENCE

Compact antenna range performance evaluation using simulated pattern measurements p200

MICROWAVE CIRCUITS

Analysis of multilayer inset dielectric guides containing magnetised ferrites p390
Application of a source method for modelling step discontinuities in microstrip circuit p169
Design of compact monolithic dielectric-filled metal-pipe rectangular waveguides for millimetre-wave applications p451
Electronically steered antenna system for the Australian Mobilesat p347
Fabrication and microwave characterisation of multilayer circuits for MMIC applications p225
Fully passivated W-band InAlAs/InGaAs/InP monolithic low noise amplifiers p361
Improved approximation for effective permeability in microwave ferrites p444
Large-signal optically controlled HEMT model and oscillator design p487
Millimetre-wave frequency tripling using stacked heterostructure-barrier varactors on InP p272
Modelling of thin-film HTS/ferroelectric interdigital capacitors p397
Novel nine-port network analyser for measuring scattering coefficients of two-port devices p137
Scattering parameters of arbitrarily oriented slot-coupled microstrip lines p141
TLM diakoptics for coupled-mode analysis of GaAs MESFET distributed amplifier p261
Whispering gallery dielectric resonator mode GaAs FET oscillator p441
Wideband active microwave isolators using GaAs MMIC technology p179

MICROWAVE MEASUREMENT TECHNIQUES

Improved HTSC surface loss measurements evaluating a multipath transmission signal p491
Microwave measurement of the nonlinear refractive index of PZT p189
Novel nine-port network analyser for measuring scattering coefficients of two-port devices p137

NEURAL NETS

Improved prediction of I_{PZ} and I_G indices using neural networks p341

NUMERICAL ANALYSIS

Analysis of interconnect networks with conducting wedge loaded by an inhomogeneous dielectric substrate p217
Analysis of quasiperiodic reflector antenna p293
Analysis of surface-wave excitation and radiation mechanisms of a monopole on a circular grounded dielectric slab with critical thickness p335
Analysis of TM scattering from open two-dimensional perfectly conducting shells using aggregated compactly-supported wavelet bases p152
Application of a source method for modelling step discontinuities in microstrip circuit p169
Application of adaptive absorbing boundary condition to finite element solution of three-dimensional scattering p57
Bifurcated waveguide fed broadwall slots radiating through a baffle p465
Characterisation of near-field focusing with application to low altitude beam focusing of the Arecibo tri-reflector system p284
Comparative study of two integral-equation formulations for inductive irises in rectangular waveguides p483
Complex gyrator circuit of a junction circulator using weakly magnetised planar irregular hexagonal resonator p532
Convergence of the fictitious-current model p163
Cross-coupling between open-ended coaxial radiators p265
Electric field integral equation for cylindrical structures p147
Electromagnetic field behaviour at edges in general bianisotropic media p527
Entire-domain analysis of thin-wire antennas in layered media p317
Finite difference solution of EM fields by asymptotic waveform techniques p512
Free space dyadic Green's function applied to the full-wave numerical analysis of planar transmission lines and dielectric waveguides p328
General entire-domain method for analysis of dielectric scatterers p498
Hybrid FE/MoM analysis of a cavity-backed slit loaded with anisotropic material p422
Image reconstruction of a perfectly conducting cylinder by the genetic algorithm p249
Improved approximation for effective permeability in microwave ferrites p444
Improved solution for mode coupling in different-sized circular apertures and its application p457
Improvements of dipole, helix, spiral, microstrip patch and aperture antennas with ground planes by using corrugated soft surfaces p244
Method of lines for analysis of crossing transmission lines with finite-thickness conductors p254
Parameter-extraction-like approach to derivation of boundary integral equation for shielded transmission lines p73
Quasistatic analysis of microstrip lines on lossy inhomogeneous substrates p379
Radiation by axial slots on a dielectric-coated nonconfocal conducting elliptic cylinder p124
Radiation characteristics of rectangular patch antennas with a laminated ground plane p107
S-parameter analysis of multislot microstrip patch arrays: spectral domain approach p430
Scattering from elongated objects: direct solution in O(N log^2 N) operations p277
Single-layer dipole array for linear-to-circular polarisation conversion of slotted waveguide array p211
Stabilised CPFDTD algorithm for the analysis of arbitrary 3D PEC structures p367
Synthesis technique for scanning and/or reconfigurable beam reflector antennas with phase-only control p402
Theoretical and experimental characterisation of CPW-fed microstrip antennas p13
TM-wave radiation from flanged parallel plate into dielectric slab p207
Two-dimensional analysis of bandwidth of open hard surface p475
Volume-conformation method to study scattering by PEC objects with FDTD p131

OPTICAL IMAGE PROCESSING

Image reconstruction of a perfectly conducting cylinder by the genetic algorithm p249

PARAMETER ESTIMATION

Electromagnetic modelling and transient simulation of interconnects in high speed VLSI circuits p373

PRODUCTION ENGINEERING

Compact antenna range performance evaluation using simulated pattern measurements p200
Use of quiet zone prediction in the design of compact antenna test ranges p193

RADAR AND RADIONAVIGATION

Bifurcated waveguide fed broadwall slots radiating through a baffle p465
Characterisation of near-field focusing with application to low altitude beam focusing of the Arecibo tri-reflector system p284

RADAR THEORY

Application of parametric models to inverse scattering problems p31

RADIO SYSTEMS

Comparison of computational electromagnetic codes applied to a sphere canonical problem p309
Electronically steered antenna system for the Australian Mobilesat p347
Fade slope on 10 to 30 GHz Earth-space communication links—measurements and modelling p353
Investigations on the prediction of radiowave propagation in urban microcell environments using ray-tracing methods p36
Obstacle diffraction and site shielding under varying incident illumination p87
Short-term frequency scaling of clear-sky and wet amplitude scintillation p521
Slot-coupled self-diplexing array antenna for mobile satellite communications p119

RADIOWAVE PROPAGATION

Attenuation due to hydrometeors at 94 GHz: experimental results and comparison with theory p79
Diffraction over an infinitely wide plateau p94
Fade slope on 10 to 30 GHz Earth-space communication links—measurements and modelling p353
Improved prediction of I_{F2} and I_D indices using neural networks p341
Investigations on the prediction of radiowave propagation in urban microcell environments using ray-tracing methods p36
ITU model for multi-knife-edge diffraction p539
Obstacle diffraction and site shielding under varying incident illumination p87
Quasicubic-segmented ionospheric model p323
Short-term frequency scaling of clear-sky and wet amplitude scintillation p521

SEMICONDUCTOR DEVICE MODELLING

Large-signal optically controlled HEMT model and oscillator design p487

SEMICONDUCTOR DEVICES AND MATERIALS

Electromagnetic modelling and transient simulation of interconnects in high speed VLSI circuits p373
Fully passivated W-band InAlAs/InGaAs/InP monolithic low noise amplifiers p361
Millimetre-wave frequency tripling using stacked heterostructure-barrier varactors on InP p272

SIGNAL GENERATORS

Large-signal optically controlled HEMT model and oscillator design p487
Whispering gallery dielectric resonator mode GaAs FET oscillator p441

SINGLE ANTENNAS

Analysis of post-tuned cavity-backed circular microstrip patch antennas p18
Analysis of quasiperiodic reflector antenna p293
Analysis of surface-wave excitation and radiation mechanisms of a monopole on a circular grounded dielectric slab with critical thickness p335
Asymmetrical Gauss-Hermite beam mode analysis of corrugated pyramidal rectangular horn p385
Characterisation of near-field focusing with application to low altitude beam focusing of the Arecibo tri-reflector system p284
Compact antenna range performance evaluation using simulated pattern measurements p200
Electric field integral equation for cylindrical structures p147
Entire-domain analysis of thin-wire antennas in layered media p317
Fabry-Perot approach to the design of double layer FSS p157
Improvements of dipole, helix, spiral, microstrip patch and aperture antennas with ground planes by using corrugated soft surfaces p244
Radiation by axial slots on a dielectric-coated nonconfocal conducting elliptic cylinder p124
Radiation characteristics of a spherical helical antenna p7
Radiation characteristics of rectangular patch antennas with a laminated ground plane p107
Short-term frequency scaling of clear-sky and wet amplitude scintillation p521
Simulated annealing applied to the Misell algorithm for phase retrieval p298
Synthesis technique for scanning and/or reconfigurable beam reflector antennas with phase-only control p402
Theoretical and experimental characterisation of CPW-fed microstrip antennas p13
Theoretical investigation of aperture-coupled rectangular dielectric resonator antenna p113
Use of quiet zone prediction in the design of compact antenna test ranges p193

SUPERCONDUCTING MATERIALS AND DEVICES

Free space dyadic Green's function applied to the full-wave numerical analysis of planar transmission lines and dielectric waveguides p328
Improved HTSC surface loss measurements evaluating a multipath transmission signal p491
Modelling of thin-film HTS/ferroelectric interdigital capacitors p397

TELECOMMUNICATION

Comparison of computational electromagnetic codes applied to a sphere canonical problem p309

TRANSMISSION LINE THEORY

Analysis of a pair of dielectric coated cylinders above a dielectric substrate p67
Analysis of interconnect networks with conducting wedge loaded by an inhomogeneous dielectric substrate p217
Analysis of multilayer inset dielectric guides containing magnetised ferrites p390
Application of a source method for modelling step discontinuities in microstrip circuit p169
Approximate formula for cutoff wavenumber of lowest-order TM mode of a hollow metallic waveguide of arbitrary cross-section p454
Comparative study of two integral-equation formulations for inductive irises in rectangular waveguides p483
Complex gyrator circuit of a junction circulator using weakly magnetised planar irregular hexagonal resonator p532
Coplanar waveguide bend with radial compensation p447
Correction of the parameters of the equivalent circuit proposed by Montgomery for a two-terminal-pair junction p542
Cross-coupling between open-ended coaxial radiators p265
Electromagnetic modelling and transient simulation of interconnects in high speed VLSI circuits p373
Finite difference solution of EM fields by asymptotic waveform techniques p512
Free space dyadic Green's function applied to the full-wave numerical analysis of planar transmission lines and dielectric waveguides p328
Hybrid FE/MoM analysis of a cavity-backed slit loaded with anisotropic material p422
Improved HTSC surface loss measurements evaluating a multipath transmission signal p491
Lossy chiral slabs in circular waveguides p51
Method of lines for analysis of crossing transmission lines with finite-thickness conductors p254
Mode charts for confocal annular elliptic resonators p358
Parameter-extraction-like approach to derivation of boundary integral equation for shielded transmission lines p73
Power based considerations on the spectral domain analysis of leaky waves in covered strip-like transmission lines p25
Quasistatic analysis of microstrip lines on lossy inhomogeneous substrates p379
Scattering from a dielectric cylinder with multiple eccentric cylindrical dielectric inclusions p505
Scattering parameters of arbitrarily oriented slot-coupled microstrip lines p141
Stabilised CPFDTD algorithm for the analysis of arbitrary 3D PEC structures p367
TM-wave radiation from flanged parallel plate into dielectric slab p207
Transmission line analysis of symmetrical ring resonators p184
Variational expression for propagation coefficient of an electromagnetic wave propagating along a closed rectangular chirowaveguide p174

WAVEGUIDE COMPONENTS

Application of a source method for modelling step discontinuities in microstrip circuit p169
Comparative study of two integral-equation formulations for inductive irises in rectangular waveguides p483
Complex gyrator circuit of a junction circulator using weakly magnetised planar irregular hexagonal resonator p532
Electronically steered antenna system for the Australian Mobilesat p347
Improved approximation for effective permeability in microwave ferrites p444
Millimetre-wave frequency tripling using stacked heterostructure-barrier varactors on InP p272
Mode charts for confocal annular elliptic resonators p358
Research on microstrip multiway unequal power divider/combiner p437
Stabilised CPFDTD algorithm for the analysis of arbitrary 3D PEC structures p367
Synthesis of quarter-wave coupled junction circulators using moderately magnetised disc resonators with commensurate eigennetworks p238
Transmission line analysis of symmetrical ring resonators p184
Whispering gallery dielectric resonator mode GaAs FET oscillator p441
Wideband active microwave isolators using GaAs MMIC technology p179

WAVEGUIDES

Analysis of interconnect networks with conducting wedge loaded by an inhomogeneous dielectric substrate p217
Analysis of multilayer inset dielectric guides containing magnetised ferrites p390
Comparative study of two integral-equation formulations for inductive irises in rectangular waveguides p483
Coplanar waveguide bend with radial compensation p447
Design of compact monolithic dielectric-filled metal-pipe rectangular waveguides for millimetre-wave applications p451
Free space dyadic Green's function applied to the full-wave numerical analysis of planar transmission lines and dielectric waveguides p328
Method of lines for analysis of crossing transmission lines with finite-thickness conductors p254
Mode charts for confocal annular elliptic resonators p358
Power based considerations on the spectral domain analysis of leaky waves in covered strip-like transmission lines p25
Quasistatic analysis of microstrip lines on lossy inhomogeneous substrates p379
Scattering parameters of arbitrarily oriented slot-coupled microstrip lines p141
TM-wave radiation from flanged parallel plate into dielectric slab p207
Variational expression for propagation coefficient of an electromagnetic wave propagating along a closed rectangular chirowaveguide p174
